

SAN PITCH RIVER DISTRIBUTION SYSTEM

** 1965 WATER ASSESSMENT **

\$ 2,220.50

BASIS OF ASSESSMENT:

NOTE: In order for the State Engineer's Office to convert over to having machines automatically calculate the annual assessments, the 1965 Water Assessment has been calculated on the previous year's water usage as reported to the State Engineer's office by the water commissioner instead of the previous five year's average as has been done in the past.

CALCULATION OF THE 1965 WATER ASSESSMENT:

- (1) Total acre-feet of water reported delivered in 1964: 26,000.82 acre-feet.
- (2) \$ 2,220.50 divided by 26,000.82 acre-feet of water equals
\$ 0.0854011528 cost for one acre-foot of water used during
the year of 1964. This multiplied times each amount reported
used by each water users equals his or her 1965 Water Assessment,
or pro rata share of the 1965 Water Assessment.

(3) Proof:

\$ 0.0854011528 times 26,000.82 acre-feet of water equals
\$ 2,220.50
